SUBJECT:

5 SPEED GEARBOX

MODELS:

TR7

The quality of the gear change of the 5-speed gearbox will be seriously impaired if the correct grade oil is not used.

SAE 75W EP oil should be used at all times. However, Hypoid 80 weight is acceptable for topping up purposes, but this must be regarded as emergency action and strictly limited to topping up only.

In the event that this 75W EP oil is not readily available, please contact your distributor for further advice. At the present time Quaker State's "quadrolube" is available and meets the necessary specifications.
